

Annotation for Emotion-Induced Moral Scenarios

GIVEN: You will be provided with three types of situations

1. Original Moral Situation (also termed as Neutral)
2. Same Moral Situation with a positive emotion added to it
3. Same Moral Situation with a negative emotion added to it

Rating Scale: A 1-7 Likert Scale. A low score indicates a less morally acceptable situation, and a high score means the opposite. The scores measure the overall morality of the situation and how that changes in positive and negative contexts. To define morality, it is the categorization of intentions, decisions, and actions into those that are proper, or right, and those that are improper, or wrong.

- 1 = Completely unacceptable (clear moral violation)
- 2 = Strongly unacceptable (major violation)
- 3 = Moderately unacceptable (leans wrong)
- 4 = Neutral/ambiguous (unclear, context-dependent)
- 5 = Moderately acceptable (leans right)
- 6 = Strongly acceptable (clearly appropriate)
- 7 = Completely acceptable (praiseworthy)

Instructions:

1. A complete single entry is rated for the original situation, and its positive-negative induced cases, so a total of 3 ratings per entry.
2. Consider how the emotional state influences the moral nature of the action, i.e., by how much does the moral acceptability change with emotions added.

Example (Only for understanding of rating structure)

ID	Situation	Original Rating	Positive Modified	Positive Rating	Negative Modified	Negative Rating
001	allowing my friend to throw himself under the bus for me	2	Feeling relief, I allowed my friend to throw himself under the bus for me	3	Feeling remorse, I allowed my friend to throw himself under the bus for me	5

Positive Reasoning: The addition of relief slightly diminishes the moral weight of the action as it might indicate a temporary lapse in judgment rather than a deliberate and callous choice.,

Comparison to Original: Relief suggests a momentary self-centeredness, reducing the severity compared to the original.

Negative Reasoning: The remorse indicates a deeper understanding of the harm caused, which mitigates the negative moral impact and shows ethical reflection.

Comparison to Original: Remorse provides a context where the action, while still harmful, is more forgivable due to the ethical awareness shown afterward.

Note 1: Some situations might be NSFW.

Note 2: Many situations might have awkward phrasing of added emotions. In such cases, stick to thinking as to how should the ratings change with this added emotion.
